Master Riders and Trainers talk about their experience with Attwood

"We have a custom blend of Attwood's EuroTex™ in our arena at Frontier Farms and I do believe that it has made a real difference in the soundness of our horses. It gives us the ability to get the horses in perfect form for the shows, week after week, all season long. As you know, we believe in happy horses at the farm!

Having Attwood do the warm-up arena for Menlo has been a terrific improvement to the show. We really enjoy competing here. I would highly recommend Attwood Equestrian Surfaces for all your footing needs."

- Peter Lombardo, World-Class Master Trainer, Frontier Farms

"We are working hard to have a good run at the American Eventing Championships. I truly believe that Stable View's excellent footing is helping us get there. I'm being very choosy about where we compete. I ran Waylon at another facility last year before AECs.

The footing was so hard it made him lame. We almost didn't get to go to AECs! I won't make that mistake again. Footing is so important. Thanks for your wonderful surfaces and your support of the sport!!"

- Anne Wilson, 2017 Winner of the Attwood Equestrian Surfaces Amateur Master Rider Championship cooler

To Be The Best, Train on the Best

"We are working hard to have a good run at the American Eventing Championships. I truly believe that Stable View's excellent footing is helping us get there. I'm being very choosy about where we compete. I use Wiggins at another facility but your before AECs. The footing was so hard it made him lame. We almost didn't get to go to AECs! I won't make that mistake again. Footing is so important. Thanks for your wonderful surfaces and your support of the sport!!"

\$4.4 Million Morven Park Renovating with Attwood Footing Installation

Attwood Equestrian Surfaces was chosen to be the footing provider and consultant for the Morven Park renovation. With our help, Morven was able to save money on site prep and permitting. Now Morven Park will be better than ever, from polo to steeplechasing to therapeutic riding to THREE new arenas. First class all the way! #safety #performance #innovation

"Morven Park receives about 250,000 visitors every year, many of whom are equestrians who come to compete. Morven Park has 60 days of equestrian competitions throughout the year."

Starting in the 1980s, Morven Park hosted steeplechase races – a type of horse race that includes obstacles – in addition to cross-country races. The steeplechases stopped in 2010 because of a slowing economy but the steeplechase races will return in the fall of 2018, said Stephanie Kenyon, the Executive Director of Morven Park. Racetrack renovations are currently underway.

When the renovations are done, the Equestrian Center will have two new arenas in the middle of the renovated race courses. Existing arenas, which were built in the 1970s, will also be renovated. These will be large show arenas where Kenyon hopes to attract more Olympic-level riders, which will also add to Loudoun’s economy.

“Almost every American Olympic rider has ridden here at some point in their careers,” Kenyon said. “So that really makes us Loudoun County’s and Northern Virginia’s premier equestrian center. This is where they all come and have come forever.”

Menlo Charity Horse Show

A masterclass in how to create an arena in a few days for hundreds of riders to use for the length of the Menlo Charity Horse Show.

- It starts with a well thought out plan.

- After prepping the site, the GGT mats are laid down on the polo field

- Then the footing is delivered.

- Attwood creates a safe and reliable surface for hundreds of horse and riders to warm up on for the duration of the show.

Attwood in Asia!

Attwood is bringing its state-of-the-art EuroTex footing to India

In line with our launch into international markets, we are delighted to announce that work has started to bring our highly acclaimed EuroTex footing to the iconic Embassy International Riding School in Bengaluru, India.

This marks our first major project in India, and it has been a tremendous learning experience for us. From Liaising with Embassy riders and gathering feedback on what they wanted out of their new arena, to understanding the local climate, each step has been extremely enriching for our engineers who have been on site this month. We have been working closely with Director Silva Storai, the dynamic Italian equestrian who is a record-breaking two times Derby

winner and sole professional jockey in India, and she is excited to be on the verge of having an international standard arena at the club.

We are confident of completing the entire project by the middle of next month, and would post more pictures of the show jumping arena when it's ready for hosting international competitions.

Along with Embassy in India, we are embarking on other major projects in Asia (more on that in the subsequent months) and this exhibits our commitment to this region. For enquiries and to know more about how we can help you acquire an Attwood arena, please reach out to us. You can find out more about us at www.equestriansurfaces.com

Terra Nova

Our latest, and most innovative polymer-coated footing. Terra Nova is formulated from high quality silica sand and fibres, and coated with a next generation viscoelastic polymer, giving unrivalled shock absorption, grip, and rebound.

Characteristics of Terra Nova

- Very economic and competitively priced
- No watering required
- Dust-free and Non-tacky
- Consistent riding characteristics
- Manufactured from premium raw materials
- Reduced concussion with viscoelastic rebound
- Freeze-resistant and stable over a wide temperature range

Focus on Terra Nova

- Attwood's latest polymer-coated footing, TerraNova, truly is a next generation surface. In response to feedback from our customers, we set out to develop a coated surface that offers the same class-leading riding characteristics of our Pinnacle footing, but which has a completely non-stick feel. We achieved this and more, developing an exceptional footing that is even more affordable than Pinnacle.
- Coated surfaces rely on an adhesive coating to bind the sand grains and additives together. This is what helps to give the surface cohesion and support. In the case of waxed surfaces, the wax coating does a reasonable job of binding the components together, but they feel oily and often the sand sticks to just about anything that comes into contact with it! Attwood's first coated footing, Pinnacle, largely eliminates this problem. TerraNova goes to the next stage! Through ingenious design, TerraNova footing binds all the components together, without feeling the slightest bit sticky.
