Customer is Really the Horse!

We have always thought at Attwood Equestrian Surfaces that the customer really is the horse. With this in mind, we are always looking for ways to improve the experience of the horse with relation to both training and competing. "A horse that is happy in the footing is going to be more confident," said Attwood. "I think of all the feedback we get on our products. One of the most satisfying parts of my job is learning about older horses who have a new lease on life after riding on our footing. That never gets old". Attwood went on to say, "I am very committed to this process and the products we sell. All horses deserve good footing. We are very pleased to be able to provide that experience for them". Attwood Custom Curved Kickboards

Attwood Custom Curved Kickboards
Location: Aljassimya Farm, Qatar

Who knew safe could look so sexy. Introducing Attwood custom curved kickboards. Originally developed in Germany, the curved kick wall has been a longtime staple in Europe due to its safety performance and stunning good looks. Our solution offers a luxurious, modern upgrade to covered or indoor arenas in both aspects.

The kick wall can be fully customized to fit your needs and desires. You can have a natural wood-look, or stain it any color you'd like for a more finished look. You can also choose the width of the ledge, whether the doors slide or swing, and utilize the functionality of the wall by store jumping poles within them to keep your arena polished. This is Not Footing, This is Attwood!

This is not footing. This is a masterclass. This is years and years of experience. This is a proprietary blend that provides the ultimate surface.

This is not footing. This is Attwood. #horsearena #arenafooting #horsearenafooting #attwoodequestrian #horse #equestrian #stablelife #pferd #cheval #jumpallthings

Know Your Arena Footing!

How much riding are you going to do greatly affects your choice of a riding surface.

Believe it or not, arena footing does have a shelf life. Footing is actually a rather potent material that undergoes compositional and property changes with time and use. Eventually even sand will break down.

So when you invest in footing for your facility take into account how many horses, doing what kind of discipline, every day throughout the year. Five horses a day versus fifty or more, jumping cross rails or grand prix sized grids, teaching up down lessons or schooling Prix St. George movements. Your footing should be engineered to meet the demands of your equestrian life.

Product Profile - Eurotex

This new additive from Europe is truly affordable and easy to install. The unique composition of Polyester and rubber fiber is further enhanced with the addition of Geopad felt and Cleff elasticated fibers providing lateral and vertical binding to achieve optimum consistency and cushioning. It can be incorporated into new or existing sand arenas.

PRODUCT HIGHLIGHTS

- Excellent shock absorption
- Customisable to suit jumping or dressage
- Helps maintain moisture retention - less watering required
- Can be retro-fitted into existing sand arenas

Focus on Eurotex

Whilst it might be tempting to think that the additive is the most important component in a non-coated, watered surface, this would be ill-advised. Especially with this type of footing, the sand is of vital importance. Put another way, a poor sand, even when combined with the very best additive system, still won't give rise to a satisfactorily performing footing. This is because a significant level of the performance derives from the interaction between sand grains and moisture. This interaction is generally poorly understood amongst footing manufacturers, suppliers and installers. Many will supply an additive, claiming it can be used with any sand. In reality, an additive may slightly improve a poor sand, but will not bring the surface up to an acceptable condition. Here at Attwood, we will not sell our Eurotex additive unless a good sand is being specified for a new surface, or an existing sand achieves our standard.
